

## Appreciation

As a foreign student, the different conduction of the course impresses me a lot. This is the first time that I find the knowledge I learn in a thermodynamics course can be such useful, for example, the Monte Carlo method and Boltzmann distribution helps me deeper understand those knowledges related to my research topic. Moreover, the homework not only helps to check how much I understand the knowledge but also offer me a chance to practice my coding as one of the essential skills nowadays. However, given the broad range of the knowledge, I just wonder if there is any possible to recommend some English materials in each chapter.

Here is some private appreciation. I would like to say, thank you so much for your kindness during my interview of the enrolling examination, which help me lot to calm down and relax.
